Profile

UX designer and AI product builder with a background in AI enablement and marketing. I shape meaningful user journeys around real needs, clear decisions, and purposeful interactions, from first discovery to task completion. I combine research, conversion strategy, and AI-ready design systems to turn product ideas into working experiences.

Skills

Design: User flows, journey mapping, wireframes, responsive interfaces, prototyping, Figma.

Systems: Design-system architecture, typed tokens, reusable component libraries, RTL/LTR support, Figma plug-in development, system audits, installable UI packages.

Working methods: Journey mapping, heuristic review, interaction-state design, usability-test planning, experiment planning, conversion analysis.

AI: ChatGPT, Claude, Codex, context engineering, prompt design, AI-assisted prototyping, MCP integrations, workflow automation, answer engine optimization (AEO).

Marketing: Google Ads, Meta Ads, SEO, content planning, email campaigns, audience segmentation, A/B testing, customer retention.

Selected projects

Nasaq · Independent Arabic/English design system

Designed an Arabic/English system for AI products with 340 typed tokens (v1.5), 18 components with documented states, and 12 interface patterns. Delivered RTL/LTR documentation, an installable npm package, a brand kit, and an AI skill with a local MCP server for developer handoff.

Cart recovery · Andalus Smart Way

Designed an end-to-end UX strategy focused on conversion: reconnect interrupted bookings across web, app, and email, restore saved context, explain fare changes, and guide travelers through to booking completion.

Other work

- Design Handoff & Design System Doctor: Built Figma audit tools that surface delivery risks and system drift in prioritized review reports.
- Flex Academy: Designed a client conversion experience that routes beginners to a webinar and established operators to a strategy call.
- Nexus: Built a browser workspace that brings saved links, design references, and research into organized views.
- Veyra: Designed an interactive trip-planning journey that connects destination discovery with day-by-day planning.

Experience

Product Enablement & UX Consultant · Independent Jan 2025 - Present

- Built Nasaq into an AI-ready design system, connecting typed tokens and component rules to an installable package, an AI skill, and a local MCP server.
- Created Design Handoff and Design System Doctor, Figma tools that flag delivery risks and design-system inconsistencies with structured review reports.
- Built Nexus, a browser workspace for organizing saved links, design references, and daily research.
- Designed Flex Academy's client website around 2 audience journeys: webinar registration for beginners and strategy calls for existing operators.

Senior Marketing Specialist · Andalus Smart Way Jan - Dec 2024

- Designed booking-recovery journeys across 3 channels: web, app, and email.
- Connected marketing, customer experience, and measurement around saved booking context; programme reporting supplied to the case study describes a 13-15% return rate and a 4% booking rate after recovery. These are reported programme rates, not measured incremental design lift.

Marketing Specialist · Zer Jan - Dec 2023

- Identified decision barriers and friction across customer journeys, then translated them into landing-page priorities.
- Refined landing-page messaging, content hierarchy, and calls to action to connect user intent with the right next step.
- Planned A/B tests across pages and follow-up journeys to evaluate usability and conversion opportunities.

Education

Master's Degree in Physics Education Higher School of Teachers, Algeria

Bachelor's Degree in Science & Technology Higher School of Teachers, Algeria Secondary School Teaching Certificate included

Certifications

Google Digital Marketing & E-commerce Certificate Google Digital marketing, e-commerce, analytics, and marketing automation.
